

**We offer the service of the utilization of your waste at the production plants of our enterprise in Ukraine.**

Private enterprise "GLOSAR" has been in the waste utilization and recycling industry for over 15 years and is the leader in its field in Ukraine. It specializes in the recycling of rubber waste (used car tiers), plastics, and other carbon-containing waste using the method of "low-temperature pyrolysis" (the Fischer-Tropsch process). It also actively participates in and initiates research and experimental developments in the field of natural and technical sciences.

There are 29 employees in the company. The research and production laboratory (5 employees) is headed by the member-correspondent of the Academy of the Oil Industry Kochirko B.F., Ph.D. Under his management, the enterprise creates new, alternative types of fuel from waste.

Cooperative partnerships with the recycling enterprises of the industry (until 24<sup>th</sup> February 2022, there were 7 of them, and only 4 left after the full-scale invasion of the Russian of Ukraine) allows the enterprise to recycle up to 1000 tons of used car tiers per month. The recycling of waste is done on Ukrainian equipment of the Fortan type. The recycling sites are located in Kyiv Oblast.

The attached table shows the characteristics of the low freezing fuel oil which was created in the laboratory of the enterprise using car tier waste. The scientific department continues laboratory experiments to decrease the consistency of ash and sulfur in this fuel oil using the most economical method.
